What we stand for?

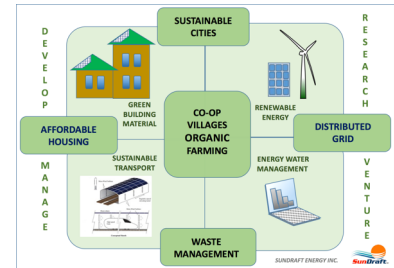

"SunDraft develops sustainable cities powered by renewable energy."

Our mission is building sustainable communities with better living standards, providing a stable economic growth for our cities. Today major cities need redevelopment of their buildings and transit infrastructure to be safe and environmentally healthy. Living in a city could be very expensive, often we see low income residents living in unhealthy poor conditions, in mobile homes and trailers. With the rise in population and unemployment, we see a need to create Co-operative housing for low-income, homeless and small business professionals who are an important part of our society. Similarly, in major cities parking and vehicle congestion makes commuting harder for residents requiring a well planned, frequent public transit service.

We address redevelopment of ailing infrastructure, vacant properties to make our communities safer and better designs for disaster prone regions. We build infrastructure which is not just environment friendly but accessible, innovative for user experience. Our products and projects are build with human centric design approach. The difference we create is by putting ourselves in the place of a public transit commuter or a low income individual to make their living spaces functionally flowing, user friendly as well as safe.

What Products & Services we offer?

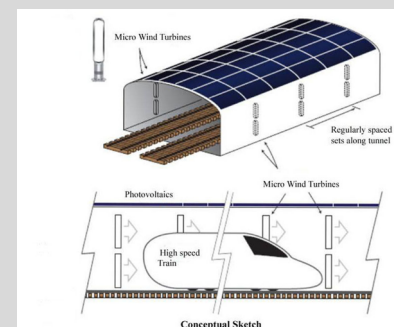

SunDraft's product and service portfolio includes:

- Developing Sustainable Cities
- Distributed Grid – Solar, Wind
- Affordable housing for low income Communities
- Redevelopment of Mobile Communities
- Redeveloping and Solar cabins for disaster regions
- Sustainable public transit
- Homeless Food Service and Shelters
- Care Centers

**"Our Natural Environment Heals & Inspires Us
SUNDRAFT Promotes Better Health and Economy"**

Previous Achievements

In 2012 we were Cleantech Open Western Region Semifinalist proposed solar integrated high-speed rail. Last two years we were involved with San Jose State's Solar Pod Car project promoting well connected sustainable transit system for our cities.

City Development Project Proposed

Affordable Housing – mixed use communities improving the standards of living for low income families and people with special needs providing a working and living space to improve local economy including food services and shelter accomodations for homeless

Community Centers – zero waste bulk retail food stores including theme based semi open space for gathering and recreation for families with an educational purpose towards environment, green living promoting green products and local business

City Transit Projects – a focus on well connected and smart sustainable public transit system to connect the missing loops efficiently to functionally improve our transit network and attract more users
